

Business Discovery Document: PA Data Analytics

Document Version: 1.0

Project: Web App / Site Redesign

Page 1: Brand Foundation & Core Identity

1.1 Business Overview

- **Business Name:** PA Data Analytics
- **Founder:** Patience Anono (Lead Analyst)
- **Headquarters:** Nairobi, Kenya (Operating Globally)
- **Industry:** Data Science, Marketing Intelligence, and Business Consulting.
- **Primary Objective:** To transform raw data into actionable stories that drive revenue and prove social impact.

1.2 The "North Star" (Mission & Vision)

- **Core Mission:** To make professional, enterprise-grade data analytics accessible to businesses of all sizes and budgets.
- **The Problem:** Most organizations have a massive gap between the data they collect and the decisions they make.
- **The Solution:** PA Data Analytics bridges this gap through a combination of technical analysis (Python, SQL) and strategic business communication.

1.3 Brand Voice & Personality

- **The Persona:** The "Expert Guide." Knowledgeable and highly technical, but speaks "human" language. Not a cold agency, but a specialist partner.
- **Tone of Voice:**
 - **Authoritative:** "We know the data."
 - **Transparent:** "We tell you what the data actually shows, even if it challenges your assumptions."
 - **Outcome-Driven:** "Data -> Decisions -> Growth."
- **Keywords:** Intelligence, Clarity, Impact, Accuracy, Precision.

1.4 Market Positioning

- **Unique Selling Point (USP):** Unlike standard marketing agencies that just show "likes" and "shares," PA Data Analytics uses **Advanced Customer Intelligence** (RFM Modeling, Predictive Churn, and Statistical Significance) to show real profit and loss.

- **Dedicated Social Responsibility:** A unique focus on the NGO sector with a three-tier pricing model (Pro Bono, Nonprofit, and Standard), positioning the brand as "Ethical Intelligence."

1.5 Key Performance Proof Points (The Trust Layer)

- **Total Revenue Analyzed:** \$722,000+
- **Client Base:** 12+ Global Clients.
- **Success Library:** 7+ Detailed Case Studies.
- **Full-Stack Capability:** 11 distinct services ranging from SEO to Python-based Predictive Modeling.

1.6 Visual Direction (The Design Brief)

- **Current Palette:** Navy (#1E2280), Sky Blue (#3AB5D8), and Charcoal (#2D2F3A).
- **Typography Goals:**
 - *Headings:* Should be "Serif" to feel established, trustworthy, and premium (e.g., DM Serif Display).
 - *Body:* Should be "Sans-Serif" for modern readability (e.g., Instrument Sans).
 - *Details:* "Monospace" for a "code/data" look (e.g., DM Mono).
- **Design Vibe:** "High-Tech Boutique." Think clean white space, thin lines, subtle data-grid patterns, and high-contrast professional sections.

This is where we define how the business actually makes money and the technical complexity of each offering. This page will guide your **Pricing Page** and **Service Detail** sections.

Business Discovery Document: PA Data Analytics

Document Version: 1.0

Project: Web App / Site Redesign

Page 2: Service Architecture & Revenue Streams

2.1 The Revenue Hierarchy (Value Ladder)

PA Data Analytics operates on a three-tier revenue model. Your design should guide users from low-friction products to high-ticket consulting.

- * **Tier 1: Passive/Digital Products (\$19 - \$49)**
 - * **Goal:** Lead generation and instant trust.
 - * **Offerings:** Excel/Google Sheets trackers (Content Performance, Sales Tracking).
- * **Tier 2: Standard Analytical Projects (\$75 - \$300)**
 - * **Goal:** Solving specific, localized business problems.
 - * **Offerings:** GA4 Audits, SEO Intelligence, KPI Dashboards, Campaign Audits.
- * **Tier 3: Strategic & Predictive Intelligence (\$350 - \$1,000+)**
 - * **Goal:** Long-term partnership and high-level data science.
 - * **Offerings:** Python-based Churn Prediction, RFM Segmentation, LTV Forecasting.

2.2 Core Service Pillars (Content Breakdown)

Pillar	Service Focus	Technical Stack	Pricing Baseline
:---	:---	:---	:---

| ****01: Growth Intelligence**** | Marketing ROI, Attribution, SEO, and User Behavior. | GA4, HubSpot, Meta/Google Ads | From \$150 - \$350 |

| ****02: Predictive Analytics**** | Churn prediction, A/B Testing, and Sales Forecasting. | Python, Scikit-learn, Statistics | From \$300 - \$450 |

| ****03: Decision Systems**** | BI Dashboards and Automated KPI Reporting. | Power BI, Tableau, Looker Studio | From \$150/mo - \$200 |

| ****04: NGO & Impact**** | Grant compliance and Impact Dashboards. | Excel, Power BI, SQL | Tiered (Free - \$300+) |

2.3 Premium "Flagship" Capabilities

These are the "High-Margin" services that require the most prominent placement in the UI:

1. ****RFM Modelling:**** Segmenting customers by Recency, Frequency, and Monetary value to identify "Whales" vs. "Churn-risks."
2. ****Churn Prediction:**** Using machine learning (Python) to tell a client who is going to quit **before** they actually leave.
3. ****Impact Storytelling:**** Bridging Pillar 03 and 04—turning boring donor data into funder-ready visual narratives.

2.4 Product Ecosystem (The Shop)

The "Shop" is a critical revenue stream for small businesses who cannot afford a full analyst.

- * ****Current Inventory:**** Content Performance Tracker, Sales Tracking System.
- * ****Planned Inventory:**** Freelancer Income Tracker, Donor Tracking Sheet, Marketing ROI Tracker.
- * ****Design Requirement:**** The product section must look clean and "e-commerce light" with clear "Buy Now" triggers.

2.5 NGO Specialized Tiering

This is a strategic "Social Proof" move. The business uses a sliding scale:

- * ****Grassroots:**** Pro Bono (Builds brand heart).
- * ****Mid-Sized:**** Nonprofit Rate (\$100 - \$200).
- * ****Large NGO:**** Standard Corporate Rates.

2.6 The "Decision System" Retainer

To ensure recurring revenue, the business offers **KPI Reporting & Automation**.

- * **Frequency:** Weekly or Monthly.
- * **Value:** Client receives a video walkthrough + updated dashboard.
- * **Starting Price:** \$150/month.

Page 2 Summary for Design:

- * You need a "Tiered" layout for services.
- * You need an "Add to Cart" or "Download Now" functionality for the \$19 products.
- * You need a dedicated "NGO" landing area that feels different from the "Corporate" area.

This page defines **who** is visiting the site and **how** the design should move them from "just looking" to "paying client." This is the blueprint for your **User Experience (UX) and Navigation Flow.**

Business Discovery Document: PA Data Analytics

Document Version: 1.0

Project: Web App / Site Redesign

Page 3: Target Personas & Customer Journey

3.1 Key User Personas

To design an effective UI, we must solve the specific "Headaches" of these four distinct groups:

| Persona | Profile | The "Headache" (Pain Point) | The "Hero" Solution |

| :--- | :--- | :--- | :--- |

| **The E-com Founder** | Scaling brand (\$10k-\$50k/mo spend). | "I'm spending thousands on ads but I don't know my actual profit per customer." | **LTV & Churn Analysis.** |

| **The NGO Director** | Managing donor-funded programs. | "I have the impact, but I can't visualize it well enough to win the next big grant." | **Impact Dashboards.** |

| **The Marketing Lead** | Busy manager in a growing company. | "I have data in Meta, Google, and Shopify, but it takes me 3 days to make one report." | **KPI Automation.** |

| **The Solopreneur** | Individual creator or freelancer. | "I know I should track my data, but I can't afford a \$500 audit yet." | **The \$19 Shop Products.** |

3.2 The Decision Psychology (User Journey)

The website must support two different "speeds" of buying:

Path A: The High-Ticket Consultant (Services)

1. **Awareness:** User lands on the site via a Case Study (e.g., "How we analyzed \$722k in revenue").
2. **Validation:** User visits the **About** page to see Patience's technical stack (Python, SQL).
3. **Trust:** User reads a specific Case Study that matches their industry.
4. **Conversion:** Clicks **"Book a Free Discovery Call"** (Primary CTA).

Path B: The Quick-Fix Buyer (Shop)

1. **Awareness:** User searches for "Content Tracker Excel" or clicks a social link.
2. **Validation:** Sees a clean preview of the spreadsheet and a low \$19 price point.
3. **Conversion:** Clicks **"Buy Now"** (Secondary CTA).
4. **Upsell:** After 3 months of using the tool, they realize they need custom work and move to Path A.

3.3 Conversion Triggers (Design Requirements)

To move these personas through the journey, the design must include:

- * **The "Hard Proof" Bar:** A scrolling or static row of tools (Power BI, Python, etc.) and metrics (\$722k analyzed).

- * **The "Actionable" Insight:** Every service description should end with a "Result" (e.g., "Result: Stop wasting ad spend on TikTok if it isn't converting").
- * **The "Frictionless" Booking:** A clear, high-contrast button for Calendly that follows the user as they scroll.

3.4 UX Content Mapping (Site Map Recommendation)

Based on the personas, your navigation should be structured as follows:

- * **Header:**
 - * **Services** (Categorized by Growth, Predictive, Dashboards).
 - * **Our Work** (The 7+ Case Studies).
 - * **NGO/Impact** (Specialized entrance for nonprofits).
 - * **Shop** (Self-service tools).
 - * **CTA Button:** "Book Discovery Call."
- * **Footer:**
 - * Email, Instagram, Nairobi location, and "Data -> Decisions -> Growth" tagline.

3.5 Emotional Connection (The "Why")

While the data is cold/logical, the reason people hire Patience is **peace of mind**.

- * **The Design Goal:** Use the Navy and Charcoal colors to create a sense of **Stability and Intelligence**.
- * **The Visual Metaphor:** Use clean charts, geometric shapes, and "organized" layouts to show that PA Data Analytics brings **order to chaos**.

Page 3 Summary for Design:

- * Create a "Results-First" homepage.
- * The Shop needs to feel like an "easy win" for small budgets.
- * The NGO section needs to feel "Mission-Driven" but still highly professional.

This final page serves as the bridge between your business strategy and the actual build. Use this as your quality control list before you open Figma or your code editor.

Business Discovery Document: PA Data Analytics

Document Version: 1.0 Project: Web App / Site Redesign

Page 4: Technical Specs, SEO & Design Checklist

4.1 The Technical Proof Stack (Showcase Tools)

The design must visually represent the founder's "Full-Stack" technical capability. These logos/icons should be grouped or featured as a "Technical Toolkit" section:

- Data Visualization: Power BI, Tableau, Looker Studio.
- Languages & Libraries: Python, SQL, Pandas, Scikit-learn.
- Platforms: GA4 (Google Analytics 4), HubSpot, Meta Ads, Google Ads.
- Infrastructure: GitHub, Jupyter Notebooks.

4.2 SEO Keyword Strategy (Search Pillars)

To ensure the site ranks well, these specific phrases must be included in H1/H2 tags and Metadata:

- Primary Keywords: Marketing Analytics Nairobi, E-commerce Data Intelligence, Predictive Churn Modelling.

- Secondary Keywords: NGO Impact Reporting, ROAS Attribution Analysis, Power BI Executive Dashboards, Customer LTV Forecasting.
- Local SEO: "Data Analytics Partner Kenya," "Marketing Intelligence Nairobi."

4.3 Functional UI Component Checklist

Ensure your design includes the following interactive elements:

1. The "Live" KPI Bar: A hero-section component showing the stats (\$722k revenue analyzed, etc.).
2. Pillar Navigation: A way to switch between the 4 pillars (Marketing, Predictive, Dashboards, NGO) without feeling overwhelmed.
3. The Shop Grid: A clean grid for the \$19 trackers with a "Quick View" of the spreadsheet features.
4. Case Study "Cards": Small, high-impact summaries that click through to a full breakdown.
5. Calendly Integration: An embedded booking widget or a clear modal trigger.

4.4 Design Aesthetic: "The High-Tech Boutique"

- Backgrounds: Use mostly white or off-white for high readability, with Navy (#1E2280) used for high-impact section breaks (like the NGO or CTA sections).
- Accents: Use Sky Blue (#3AB5D8) for "Action" items (buttons, links, active states).
- Data Textures: Subtle background elements like faint grid lines, dot patterns, or mathematical notations in very light grey to reinforce the "Data Science" vibe.
- Micro-interactions: Smooth scroll reveals (Intersection Observer) and hover

states that change line weights or add subtle shadows.

4.5 Final "No-Miss" Content Audit

Before finishing, cross-reference your design with this list to ensure nothing from the original sample was deleted:

- [] Pricing: Every service has a "Starting from..." price point.
- [] Founder Story: The transition from "the gap in organizations" to "bridging the gap" is clear.
- [] The NGO sliding scale: Make sure the "Pro Bono" tier is visible to build brand trust.
- [] Case Study Outcomes: Do not just list the problem; every case study must highlight the Outcome in bold.

4.6 Global vs. Local Positioning

The site must strike a balance:

- The Nairobi Pride: Use "Nairobi, Kenya" in the footer and hero eyebrow to establish a local base of operations.
- The Global Scale: Use language like "Global Clients" and currency in USD (\$) to ensure the brand appeals to international e-commerce founders.

Page 4 Summary: You now have the Brand Identity, the Service List, the Target Personas, and the Technical Specs.

Next Steps for You:

1. Moodboarding: Group images of high-end tech consultancies and data-heavy UIs.
2. Sitemapping: Based on Section 3.4.
3. Wireframing: Focus on the "Path A" and "Path B" journeys from Section 3.2.

You are now fully equipped to start the "Perfect Design" process. Would you like a final "Structure Summary" of the homepage sections before you begin?
